

2. Real Estate CRM

A purpose built, enterprise grade CRM engineered specifically around how a high performing real estate sales team actually operates, from the very first second a lead enters the system, all the way through to the moment an agreement is signed and a unit is marked sold. This is not a generic, off the shelf CRM repackaged for real estate. It is architected from the ground up for exactly the workflow Badri Kedar Developers runs today, with three dedicated, role based panels, so every single person in your organisation, from ownership to the newest salesperson, sees exactly the information they need and nothing they do not.

2.1 Admin Panel

- A powerful, centralized command dashboard that pulls in every single incoming lead across every marketing source, every campaign and every project into one unified, real time view, so nothing ever falls through the cracks again
- One click lead distribution, allowing admin to instantly assign any lead to the most suitable salesperson directly from the dashboard, ensuring every enquiry is picked up within minutes, not hours
- Deep, granular performance tracking for every individual salesperson, covering leads assigned, leads converted, average response time, follow up discipline and overall conversion ratio, giving management data backed clarity on who is performing and where support is needed
- Full, real time visibility into the exact status and stage of every single lead in the system at any given moment, so management is never left guessing where a deal actually stands
- Complete access control to add, remove, promote or reassign sales and channel partner accounts, keeping your growing team perfectly organised as the business scales
- Consolidated, presentation ready reporting built specifically for management and ownership review, turning raw sales activity into clear, actionable business intelligence
- The instant a salesperson or channel partner marks a deal as closed, admin receives a real time notification and fills in the official agreement and property details exactly as per the paper document shared by the client, ensuring every closed deal is recorded accurately, consistently and in full compliance with the client's own documentation
- Right alongside this, admin gets a dedicated upload box to upload proof of the sold unit, which then automatically and instantly marks that exact unit as sold on the live project map, keeping inventory status accurate in real time, with this control resting solely with admin for complete accuracy

2.2 Sales Person Panel

- A clean, distraction free, prioritized list of every lead assigned to the salesperson, so they always know exactly who to call next without wasting a single minute
- Instant primary categorisation of every lead as Hot, Warm or Cold, allowing the entire team to focus energy where it converts fastest
- Rich, additional stage wise categorisation covering Interested, Site Visit Scheduled, Site Visit Done, Negotiation and Deal Closed, giving a complete, granular picture of exactly where every single lead stands in the sales journey at all times

- Built in notes, call logs and automated follow up reminders against every lead, ensuring absolutely no enquiry is ever forgotten, delayed or lost due to human error
- The moment a deal is finalized, the salesperson simply marks it as Deal Closed and submits it, instantly triggering a real time notification to the admin panel, so management is informed the second a sale happens
- A personal, motivating performance dashboard so every salesperson can track their own targets, conversions and standing, driving healthy competition and higher productivity across the team

2.3 Channel Partner Panel

- A dedicated, professional login for channel partners to directly submit and track every lead they bring in, giving them a proper platform instead of scattered WhatsApp messages
- Real time, transparent visibility of the exact status of every lead they have referred, building trust and accountability between Badri Kedar Developers and its channel partner network
- A clean, accurate, always up to date record of every closed deal for smooth and dispute free commission tracking and reconciliation
- When a channel partner successfully closes a deal, they simply mark it as Deal Closed and submit it, instantly triggering a real time notification to the admin panel, keeping the entire team perfectly in sync
- Keeps every channel partner interaction organised, documented and professional, fully outside of personal WhatsApp chats and phone calls that are impossible to track or audit later

2.4 Platform Capabilities

- Fully responsive, pixel perfect experience on both desktop and mobile, empowering salespersons and channel partners to work confidently and efficiently straight from the field, a site visit or a client meeting
- Engineered from day one to be fully compatible with future integrations, including WhatsApp API, telephony systems and payment gateways, so the system can grow, expand and evolve alongside your business without ever needing to be rebuilt from scratch
- Bank grade, secure, role based login for every single user, with data access strictly limited to their role, protecting your leads, your client data and your business intelligence at every level
- Built on a scalable architecture, fully structured to support the addition of new panels, new projects and new custom reports as your organisation continues to grow
